## Facts About Dogs and Cats:

1. An estimated 1 million dogs in the United States have been named the primary beneficiary in their owner's will.
2. Dogs can alert their owners of an epileptic seizure up to an hour before it occurs.
3. The dog was one of the first animals domesticated by humans.
4. A cat uses its whiskers as feelers to determine if a space is too small to squeeze through.
5. Contrary to popular belief, dogs do not sweat by salivating. They sweat through the pads of their feet.
6. Cats cannot break a sweat because they have no sweat glands.
7. Contrary to popular belief, dogs do not sweat by salivating. They sweat through the pads of their feet.

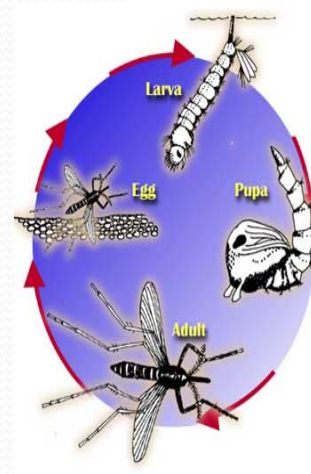

# Mosquito Management Stats

## August 2014

# Represents Amount of Times Performed	August 2014	July 2014	August 2013
Altosid/BTI (larviciding)	203	22	55
Adulticide Spraying hrs	5	5	19
Scheduled for Adulticide	60	60	62
Landing Rate Counts	4	3	11
Mosquito concerns	1	0	2
Training for Spraying	2	2	0
Work done in chemical room	10	5	1
Totals :	285	97	150

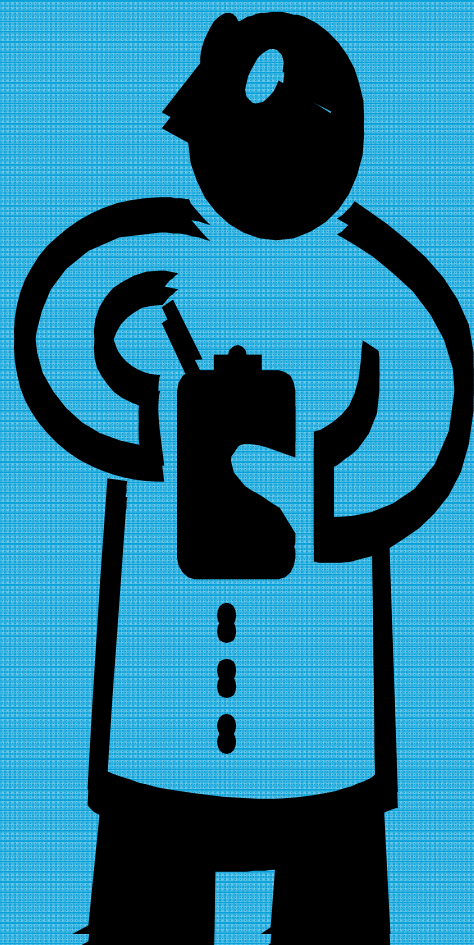

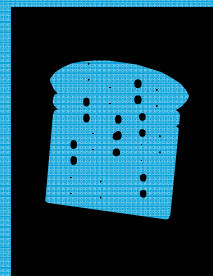

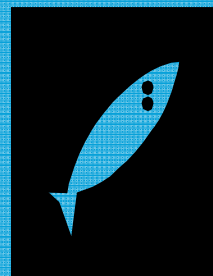

### Mosquito Fast Facts

1. In the interest of science, Arctic researchers uncovered their chests, arms, and legs and reported as many as 9000 mosquito bites per person, per minute. At this rate, and unprotected human would lose one half of his blood supply in approximately 2 hours.
2. Some people are more attractive to mosquitoes than others. It is not clear why, but probably has something to do with the 300 odd chemicals produced by the skin.
3. A mosquito can smell the carbon dioxide you exhale from about 60 to 75 feet away.
4. Most mosquitoes do not fly very far from their larval habitat, but the salt marsh mosquito migrates 75 to 100 miles over the course of its life.

<p>September is National Food Safety Month. This annual campaign was created in 1994 to heighten the awareness about the importance of food safety education. Here are some food safety tips from the United States Department of Agriculture (USDA): 1. One important method for preventing biological hazards is to clean and sanitize food contact surfaces. 2. 41 °F-135 °F represents the temperature danger zone. 3. A main cause of foodborne illnesses is by abusing the time-temperature relationship. 4. Cooking the food to the required internal temperature will kill harmful bacteria. 5. The most common cause of a foodborne illness is a virus. Taken from: <a href="http://nfsmi-web01.nfsmi.olemiss.edu/ResourceOverview.aspx?ID=327">http://nfsmi-web01.nfsmi.olemiss.edu/ResourceOverview.aspx?ID=327</a></p>
