Pets can be valuable members of your family. When you introduce an animal into your home, help keep everyone safe with these helpful animal safety tips:

- Know the breed of dogs and their disposition. Some dogs tend to bond to one person or family member and become defensive around others.

- Do not try to pet an animal while they are eating, sleeping or caring for their young. Also let them see and sniff you first. Teach children this animal safety approach.

- Teach your children not to provoke or tease a strange animal. Half of all attacks to children are considered provoked.

- Do not hug an unfamiliar dog or other animal, especially around the animal's neck.

- Always supervise small children that are near animals.

- If an animal attacks, you may be able to decrease injury by feeding them your jacket, purse, bike or anything else that can serve as a barrier between you and the animal.

- If you're knocked to the ground, curl into a ball with your hands over your ears and lie still until the animal goes away. Teach this animal safety technique to children.

- For the safety of all, animals should be leashed or in a fenced area at all times.

Harmful algal blooms (HABs) are the rapid growth of algae that can cause harm to animals, people, or the local ecology. A HAB can look like foam, scum, or mats on the surface of water and can be different colors. HABs can produce toxins that have caused a variety of illnesses in people and animals. HABs can occur in warm fresh, marine, or brackish waters with abundant nutrients and are becoming more frequent with climate change.

Harmful algal blooms (HABs) can produce toxins that can cause illness in people, companion animals (dogs, cats), livestock (sheep, cattle), and wildlife (including birds and mammals). Exposures to the toxins can occur when people or animals have direct contact with contaminated water by:

- Swimming
- Breathing in aerosols (tiny airborne droplets or mist that contain toxins) from recreational activities or wind-blown sea spray^{1,2}
- Swallowing toxins by drinking contaminated water or eating contaminated fish or shellfish³.

Human and animal illnesses and symptoms can vary depending on the how they were exposed, how long they were exposed, and the particular HAB toxin involved.

Visit the following pages for more information on illness and symptoms associated with freshwater or marine environments.

- Freshwater Environments
- Marine Environments

For more information on how to reduce HAB-associated illnesses, please see Prevention & Control.

Tires	20	0
Metal	100	0
E-Waste	1,141	0
Totals :	7,641	3,934

Recycle for a Greener Holiday Season

During the holidays, residents toss away more material than at any other time of the year.

Newspapers get thicker due to robust print advertising and numerous inserts. Mailboxes become stuffed with flyers, catalogs, offers and greeting cards. Package delivery services are busy dropping off boxes all over town. The result...more waste and more recyclables.

Recycling centers have an additional volume which can grow by more than 25 percent during the holiday period.

Work done in chemical room	17	14
Totals :	517	165

Tips to Prevent Mosquito Bites

Using the right insect repellent and other preventive actions can discourage mosquitoes, ticks and other biting insects from landing on you. Here are tips for other preventive actions you can take against mosquitoes.

Remove Mosquito Habitats

- Eliminate standing water in rain gutters, old tires, buckets, plastic covers, toys, or any other container where mosquitoes can breed.
- Empty and change the water in bird baths, fountains, wading pools, rain barrels, and potted plant trays at least once a week to destroy potential mosquito habitats.
- Drain or fill temporary pools of water with dirt.
- Keep swimming pool water treated and circulating.

Use Structural Barriers

- Cover all gaps in walls, doors, and windows to prevent mosquitoes from entering.
- Make sure window and door screens are in good working order.
- Completely cover baby carriers and beds with netting.

Avoid Getting Bitten

- Keep mosquitoes away from exposed skin by wearing long-sleeved shirts, long pants, and socks.
- Tuck shirts into pants and pants into socks to cover gaps in your clothing where mosquitoes can get to your skin.
- Stay indoors at sunrise, sunset, and early in the evening when mosquitoes are most active.
