	Total Temporary Inspections	2	\$0.00	
	Total Establishment Permits (annual)	0	\$20.00	
	Total Health Inspections	2	\$20.00	

Botulism

Botulism is a rare, yet serious illness that can be caused by eating foods contaminated with the bacteria *Clostridium botulinum*. This bacteria is commonly found in soil and produces a toxin that affects the nervous system. It is rare but if contracted requires immediate medical attention.

What causes foodborne botulism?

Foodborne botulism comes from eating foods contaminated with the toxin. The main sources are home-canned foods with a low-acid content, improperly canned commercial foods, home-canned or fermented fish, herb-infused oils, baked potatoes in aluminum foil, cheese sauce, bottled garlic, foods held warm for extended periods of time and honey for infants.

Coyote Fun Facts:

1. The coyote has a very developed sense of smell which he uses for finding food and avoiding dangerous predators.
 2. In order to not get detected by predators, sometimes coyotes walk on their toes to make as little noise as possible.
 3. Just like dogs, coyotes use their urine in order to mark their territory.
 4. The coyote doesn't hunt alone; usually they hunt in groups of 2-3.
 5. The coyote is able to detect hunters coming from a mile away or even more.
 6. The coyote reaches a respectable speed of 40 miles per hour.
- All in all, the coyote is one of the most interesting creatures on this earth and people should try giving them the attention they need.

Landing Rate Counts	57	52	3
Mosquito concerns	2	0	0
Training for Spraying	7	2	2
Work done in chemical room	13	8	5
Totals :	203	202	97

Mosquito Fast Facts

1. In the interest of science, Arctic researchers uncovered their chests, arms, and legs and reported as many as 9000 mosquito bites per person, per minute. At this rate, and unprotected human would lose one half of his blood supply in approximately 2 hours.
2. Some people are more attractive to mosquitoes than others. It is not clear why, but probably has something to do with the 300 odd chemicals produced by the skin.
3. A mosquito can smell the carbon dioxide you exhale from about 60 to 75 feet away.
4. Most mosquitoes do not fly very far from their larval habitat, but the **salt marsh mosquito migrates 75 to 100 miles** over the course of its life.

Recycling Stats July 2015

Aluminum cans are the worlds premiere example of a recyclable waste. Recycling aluminum requires less than five (5) percent of the energy required to make it from bauxite ore.

- Over 80,000,000,000 aluminum soda cans are used every year.
- A used aluminum can is recycled and back on the grocery shelf as a new can, in as little as 60 days.
- Every minute an average of 113,204 aluminum cans are recycled.
- The aluminum in a can is worth about 1 cent.
- The average employee consumes 2.5 beverages a day while at work.
- Over 50 percent of the aluminum cans produced are recycled.
- Two-thirds of the aluminum ever produced is in use today.
- The energy you save by recycling a single aluminum can will run a TV for three hours.
- Approximately 350,000 aluminum cans are made in a minute.
