The City of South Padre Island (SPI) is asking the community to show your love for the Island this Valentine's Day. The City has collaborated with Republic Services (aka Allied Waste) in promoting the "I Love SPI" Campaign, with the goal of getting residents involved with maintaining the Island's natural beauty by offering additional brush and bulky item pick-up services to the regular monthly service.

Between January 22<sup>nd</sup> and February 13<sup>th</sup>, residents may place brush and bulky items at the front of the property for collection without facing fines. Take advantage of this period of amnesty and clear your yard and house of unnecessary debris and items. Mow and trim around fences, concentrating on the back of the properties (utility easements). Trim your trees and plants to spruce up South Padre Island in preparation for the busy season. Your property and your home will be better protected from brush fires and other potential hazards.

### Campylobacter

Campylobacter is also a common cause of diarrhea in the United States. Most cases of campylobacteriosis, the infection caused by Campylobacter bacteria, are associated with eating raw or undercooked poultry and meat or from cross-contamination of other foods by these items. Freezing reduces the number of Campylobacter bacteria on raw meat but will not kill it completely, so proper heating of foods is still important.

Sources: Consuming raw and undercooked poultry and other meats, unpasteurized dairy products and untreated water or contaminated produce.

Prevention: Cook all foods thoroughly, prevent cross-contamination by using separate cutting boards when handling raw and cooked foods, don't drink unpasteurized milk or untreated water and wash hands frequently. Wash raw fruit and vegetables before peeling, cutting or eating.

## Valentine's Day Safety Reminders

•Thorns on roses or other flowers can be dangerous for dogs or other pets. Biting, stepping on or swallowing stems with thorns increases risk for a puncture, which can result in serious infections internally or externally.

•Chocolate is toxic to dogs and cats. The darker the chocolate, the more toxic, but dark, milk, semi-sweet and baker's chocolates all can cause adverse reactions. Darker chocolates contain caffeine-like stimulants that cause gastrointestinal, neurologic, and cardiac functions that can cause vomiting/diarrhea, hyperactivity, seizures and elevated heart rate. High fat in lighter chocolates can cause life-threatening inflammation of the pancreas, so make sure to keep the chocolate where pets can't reach it.

•Cocktails also pose a threat to pets. Because of their smaller size, even a small amount of alcohol stolen from a low-sitting glass or lapped off the floor after a spill can cause dramatic problems like vomiting/diarrhea, lack of coordination, central nervous system depression, tremors, difficulty breathing, and even coma.

***•If you think your pet has been poisoned, contact the Pet Poison Helpline at 1-800-213-6680***

### Conditions that make mosquito outbreaks worse.

Mosquitoes are more likely to be present in warmer climates. Mosquitoes can survive in temperatures over 50 degrees. If a region never falls below 50 degrees, mosquitoes can be a year-round problem. Stagnant water is the ultimate breeding ground for mosquitoes. Keep all stagnant water covered, if you must have it near your house for any reason. Even small puddles can produce thousands of mosquitoes. Rains that occur after a long drought can often produce the worst mosquito swarms, simply because predators that normally eat the mosquitoes are no longer in the area. Please remember to drain all stagnant water.
