Pets can be valuable members of your family. When you introduce an animal into your home, help keep everyone safe with these helpful animal safety tips:

•Know the breed of dogs and their disposition. Some dogs tend to bond to one person or family member and become defensive around others.

•Do not try to pet an animal while they are eating, sleeping or caring for their young. Also let them see and sniff you first. Teach children this animal safety approach.

•Teach your children not to provoke or tease a strange animal. Half of all attacks to children are considered provoked.

•Do not hug an unfamiliar dog or other animal, especially around the animal's neck.

•Always supervise small children that are near animals.

•If an animal attacks, you may be able to decrease injury by feeding them your jacket, purse, bike or anything else that can serve as a barrier between you and the animal.

•If you're knocked to the ground, curl into a ball with your hands over your ears and lie still until the animal goes away. Teach this animal safety technique to children.

•For the safety of all, animals should be leashed or in a fenced area at all times.

ABOUT FOODBORNE ILLNESS

The US food supply is among the safest in the world, but organisms that you can't see, smell, or taste - bacteria, viruses, and tiny parasites - are everywhere in the environment. According to the Centers for Disease Control and Prevention (CDC) each year 48 million illnesses, 128,000 hospitalizations, and 3,000 deaths in this country can be traced to foodborne pathogens. Foodborne illness costs Americans billions of dollars each year, and serves as a constant challenge for consumers, researchers, government and industry.

The Food and Drug Administration estimates that two to three percent of all foodborne illnesses lead to serious secondary long-term illnesses. For example, certain strains of E.coli can cause kidney failure in young children and infants; Salmonella can lead to reactive arthritis and serious infections; Listeria can cause meningitis and stillbirths; and Campylobacter may be the most common precipitating factor for a debilitating disease, Guillain-Barre syndrome. For more information on foodborne illness, visit the CDC website.
