E. coli O157:H7

Escherichia coli, better known as E. coli, are a large group of bacteria. Although most strains of E. coli are harmless, some can make you very sick. One strain, E. Coli O157:H7 (STEC) is commonly discussed in the media in association with food poisoning outbreaks, because its effects can be extremely severe.

Sources: Eating raw or undercooked ground beef or drinking unpasteurized beverages or dairy products.

Prevention: Wash your hands, cook meat (especially ground meat) and poultry thoroughly; avoid unpasteurized dairy products, juices or ciders; keep cooking surfaces clean and prevent cross-contamination. Also, don't swallow water when playing or swimming in lakes, ponds, streams or pools.

Animal safety facts: Injuries caused by animals are the second most frequent cause of emergency room visits each year.

- There are 5+ million incidents involving animals annually.
- 70% of dog bites are to children under 10 years of age, and 77% of the bites are to the facial area.
- 77% of dog bites are from dogs owned by family and friends and take place in a familiar area.
- 65% of serial attacks and 79% of rampage attacks (biting multiple people during one occurrence) are committed by Pit Bull breeds and Rottweilers.

CLEANING UP A BROKEN BULB

The EPA has suggestions to help you [prevent broken CFLs](#). However, even careful handling can result in breaks. **The following steps are best practices for cleaning up a CFL. Don't be alarmed if you don't do it right—the amount of mercury in a CFL is very small—just try to follow these precautions.** The first things that you want to do before cleaning up are:

1. have people and pets leave the room, avoiding the breakage area,
2. open a window and leave the room for five to ten minutes,
3. shut off your central heat/air system if you have one, and
4. gather the materials you will need clean up the broken bulb such as stiff paper or cardboard, sticky tape, damp paper towels, a glass jar with a metal lid or a sealable plastic bag*.

*Note that a plastic bag will not prevent the mercury from escaping, so you should remove the plastic bag from your home after clean up.

Represents Pounds Recycled of each product	March 2017	February 2017

Tips to Prevent Mosquito Bites

Using the right insect repellent and other preventive actions can discourage mosquitoes, ticks and other biting insects from landing on you. Here are tips for other preventive actions you can take against mosquitoes.

Remove Mosquito Habitats

- Eliminate standing water in rain gutters, old tires, buckets, plastic covers, toys, or any other container where mosquitoes can breed.
- Empty and change the water in bird baths, fountains, wading pools, rain barrels, and potted plant trays at least once a week to destroy potential mosquito habitats.
- Drain or fill temporary pools of water with dirt.
- Keep swimming pool water treated and circulating.

Use Structural Barriers

- Cover all gaps in walls, doors, and windows to prevent mosquitoes from entering.
- Make sure window and door screens are in good working order.
- Completely cover baby carriers and beds with netting.

Avoid Getting Bitten

- Keep mosquitoes away from exposed skin by wearing long-sleeved shirts, long pants, and socks.
- Tuck shirts into pants and pants into socks to cover gaps in your clothing where mosquitoes can get to your skin.
- Stay indoors at sunrise, sunset, and early in the evening when mosquitoes are most active.
