#### Toxoplasma gondii

Toxoplasma is a parasite that causes toxoplasmosis — a disease that can result in serious health problems in individuals who are at high risk for food poisoning: pregnant women, infants, older adults and people with weakened immune systems. Symptoms can be similar to the "flu" and include swollen lymph glands or muscle aches and pains that last for months. Other symptoms affect the eyes causing vision to be reduced or blurred or cause pain, redness or tearing in the eyes.

Sources: Eating undercooked, contaminated meat or using utensils or cutting boards that have had contact with raw meat; coming into contact with feces from an infected cat when cleaning the litter box; or drinking contaminated water. It can also be spread to infants if a mother has become infected before or while pregnant.

Prevention: Cook food to safe temperatures—a food thermometer should be used to ensure food has reached a safe temperature. Also, freeze meat properly; wash fruits and vegetables before peeling, cutting, and eating; avoid unpasteurized dairy products; maintain clean cutting boards; and always wash your hands with soap and water. In addition, use extra caution (such as wearing gloves) when cleaning a cat's litter box or touching soil in case it is contaminated with cat feces, especially if pregnant or are at a higher risk of getting sick.

## Dogs and Companionship

Dogs are instinctually pack animals. Forcing a dog to live away from its human goes against the dog's most basic instinct. If you doubt this, think of all the whining, barking, clawing dogs you have seen tied alone outside. Abandoned, but chained up, backyard dogs cannot move to comfort, shelter, or companionship. Most often their water and food bowls are empty. Dogs can offer people

the gifts of steadfast devotion, abiding love, and joyful companionship.
Unless people accept these offerings and take the time to return them in kind, it is best to not to get a dog.

# Mosquito Management Stats

**JUNE 2015** 

# Represents Amount of Times Preformed	JUNE 2015	MAY 2015	JUNE 2014
Altosid/BTI (larviciding)	64	265	2
Adulticide Spraying hrs.	16	10	2
Scheduled for Adulticide	60	60	60
Landing Rate Counts	52	16	7
Mosquito concerns	O	1	o
Training for Spraying	2	2	2
Work done in chemical room	8	8	8
Totals:	202	361	81

### **Mosquito Fast Facts**

- 1. In the interest of science, Arctic researchers uncovered their chests, arms, and legs and reported as many as 9000 mosquito bites per person, per minute. At this rate, and unprotected human would lose one half of his blood supply in approximately 2 hours.
- 2. Some people are more attractive to mosquitoes than others. It is not clear why, but probably has something to do with the 300 odd chemicals produced by the skin.
- 3. A mosquito can smell the carbon dioxide you exhale from about 60 to 75 feet away.
- 4. Most mosquitoes do not fly very far from their larval habitat, but the *salt marsh mosquito migrates 75 to 100 miles* over the course of its life.

### **Recycling Stats June 2015**

Americans buy an estimated 42.6 billion single-serving (1 liter or less) plastic water bottles each year. Almost eight out of ten end up in a landfill or incinerator. Hundreds of millions end up as litter on roads and beaches or in streams and other waterways. Taxpayers pay hundreds millions of dollars each year in disposal and litter cleanup costs.
