Shigellosis is an infectious disease caused by a group of bacteria called Shigella (shih-GEHL-uh). Most who are infected with Shigella develop diarrhea, fever, and stomach cramps starting a day or two after they are exposed to the bacteria. Shigellosis usually resolves in 5 to 7 days. Some people who are infected may have no symptoms at all, but may still pass the Shigella bacteria to others. The spread of Shigella can be stopped by frequent and careful handwashing with soap and taking other hygiene measures. http://www.cdc.gov/shigella/index.html

## **Bird Fun Facts:**

- The chicken is the closest living relative to the Tyrannosaurus Rex.
- 2. Many birds kept as pets, including doves, parakeets, and lovebirds, enjoy living in pairs for companionship.
- Owls turn their heads almost 3600 (a complete circle) but they cannot move their eyes.
- The common phrase "eat like a bird" should mean something quite different! Many birds eat twice their weight in food each day. In fact, a bird requires more food in proportion to its size than a baby or a cat.
- 5. A group of larks is called an exaltation, a group of chickens is called a peep, a group of geese is called a gaggle, a group of ravens is called a murder, and a group of owls is called a parliament

## Mosquito Management Stats August 2015

# Represents Amount of Times Preformed	AUGUST 2015	JULY 2015	AUGUST 2014
Altosid/BTI (larviciding)	53	87	203
Adulticide Spraying hrs.	3	6	5
Scheduled for Adulticide	62	60	60
Landing Rate Counts	56	57	4
Mosquito concerns	2	2	1
Training for Spraying	11	7	2
Work done in chemical room	15	13	10
Totals :	202	203	285

## **Mosquito Fast Facts**

1. Its that time of year again when whining mosquitoes zigzag and follow your breath until an annoying ritual takes place: They land, you swat, they die or fly away to lay eggs, you swell and itch.

2. Mosquito control experts say its almost impossible to forecast how good or bad a year will be in terms of mosquitoes. Too much depends on weather, high tides and rain.

3. Mosquitoes are very adaptive, lay their eggs in soil or mud, where they stay dormant until a high tide or enough rain comes along for them to hatch. Dormancy can last as long as five years. Mosquitoes season begins with a new species, a new disease, and new strategies for pest control.

4. Most mosquitoes do not fly very far from their larval habitat, but the <u>salt marsh mosquito</u> <u>migrates 75 to 100 miles</u> over the course of its life.

## **Recycling Stats August 2015**

What happens when you put the wrong items in the recycling bin? •Contamination occurs when non-recyclable or dirty items are mixed in with clean recyclable content.

 Recyclables are worth a lot of money to the manufacturers that use them, but only when they are high quality!

•Generally speaking, our recyclables are taken to state-of the-art automated recycling centers called MRFs, which use magnets, eddy currents and optical scanners to sort and bale our pile of recyclables into usable materials.

 When the wrong thing – like a plastic bag or a garden hose – ends up in the system, it can really break things down and cause major delays.
It contributes to the overall contamination of the recycling stream so the material is removed and landfilled.

olt can break the recycling equipment.
