Tip of the Month:

As the weather warms, migrating bats return from their winter destinations looking for a place to roost. Sometimes bats will do this in homes and other buildings inhabited by humans. Common roosting places include attics, roofs and chimneys. There are a few basic measures people can take to prevent bats from entering their homes. Any holes or openings ¼ inch or larger allowing access to the attic or interior of the house should be completely sealed. Window and door screens should fit tightly. Screens should be installed on top of chimneys to prevent bats from roosting in them. If bats are already in the home, they should be excluded using techniques that will allow the bats to leave the roost but not return.

Mosquito Fast Facts:

Salt marsh mosquitoes may travel up to 100 miles from their larval breeding habitat.

Most mosquitoes emerge from their watery breeding ground and stay pretty close to home. But some, like the salt marsh mosquitoes, will fly lengthy distances to find a suitable place to live, with all the nectar and blood they could want to drink.

Recycling Stats

February 2012

Recycling polystyrene - aka Styrofoam

Styrofoam is a trademark of the Dow company, but the material itself is called polystyrene. Like so many other plastics, it's all around us - very commonly used in packing material as peanuts or expanded foam, in food trays and a wide variety of other products - even explosives such as napalm and hydrogen bombs!

The bad news is (aside from its use in WMD); polystyrene is manufactured from petroleum. It's highly flammable and a chemical called benzene, which is a known human carcinogen, is used in its production.

OK, so we do not accept foam food containers, Styrofoam, or other foam products to be recycled. The question we hear is: WHAT AM I SUPPOSED TO DO WITH IT? Here are some tips...

Keep it as packing - how many times have you needed to pack something for shipping and found you had nothing on hand? Break down large lumps of styrofoam into smaller chunks and keep a bag of it handy

Craft shops - I've read that craft shops are often a good place to take styrofoam as their customers use it in their craft projects.

Planters - I've seen it used in pot plants to assist with drainage and as a filler - however, I'm not sure about the possibility of contamination when used in this way.

# Represents Pounds Recycled of each product	February 2012	January 2012
