TIP OF THE MONTH:

October is National Pet

Wellness Month! Here are some tips to help keep your pet in good health:

- Annual Exams: Pets should visit the veterinarian at least once a year. Annual exams are a great opportunity to check on the overall health and well-being of your pet and allow you to make any necessary changes in your pet's daily routine and care.
- Spay/Neuter: It is incredibly important to have your pet spayed or neutered. Not only do the procedures prevent individual medical problems such as mammary and testicular tumors and uterine infections, spaying or neutering also helps curb pet overpopulation and reduces the number of unwanted pets who are euthanized every day.
- Weight Management: Obesity is a real and newly recognized problem for pets. Prevention is much easier to accomplish than treatment, so consult your veterinarian about the right diet and exercise regimen for your pet.
- A Balanced Diet: Commercial dog and cat foods make it easy to provide a nutritionally balanced and complete diet. Dog and cat foods contain all of the different nutrients your animal needs in the appropriate quantities.
- Dental Care: Teeth and oral health are extremely important when caring for your pet and should be evaluated annually.
- Senior Pets: As animals age, their dietary requirements and their ability to digest certain foods changes. When pets grow older, they lose some ability to concentrate urine so they need to produce more, and therefore need more water intake. You can help by feeding your pets better quality proteins and avoiding red meats like beef and beef by-products.

Mosquito Fast Facts <u>WEST NILE (WNV)</u>

Who Is at Risk of Getting Sick from WNV?

People over 50 at higher risk to get severe illness. People over the age of 50 are more likely to develop serious symptoms of WNV if they do get sick and should take special care to avoid mosquito bites. Being outside means you're at risk. The more time you're outdoors, the more time you could be bitten by an infected mosquito. Pay attention to avoiding mosquito bites if you spend a lot of time outside, either working or playing. Risk through medical procedures is very low. All donated blood is checked for WNV before being used. The risk of getting WNV through blood transfusions and organ transplants is very small, and should not prevent people who need surgery from having it.

Recycling Stats September 2012

Does RECYCLING effect MOSQUITO levels?

By now many people know about the importance of recycling tires, because they free up space in landfills and are made into constructive rubber mulch. Another fact that may be more of an incentive is that recycling tires helps keep mosquitoes at bay. Yup, you read that right. The extra effort of taking tires to a responsible recycling center will make your spring and summer more pleasant, with less mosquitoes.

*Taken from Rubbermulchblog.com

If you see any old tires lying around, please contact Environmental Health Services Department, 956-761-3226, for info on how to properly recycle old tires!

# Represents Pounds Recycled of each product	September 2012	August 2012
Cardboard	930	640
