Here is some helpful advice on trapping feral cats.

Prepare traps away from the trap site so you do not disturb the cats. Line the bottom with newspaper.

Place about a tablespoon of bait at the back of the trap, past the trip plate and drizzle a trail of oil in a zigzag pattern leading to the front of the trap.

Place the traps on level ground and set them.

Never leave traps unattended. Watch from a distance where you won't intimidate the cats, but you can see if anyone is approaching.

Don't pick up sprung traps if other cats are still sniffing around the trapping area. Although the cats are scared and may thrash or seem "unhappy" remember to never let a cat out of the trap.

Contact South Padre Island Environmental Health Services for information on obtaining a trap, and how to properly operate them. SPI Animal Control Officers will handle traps that contain animals in a very safe and humane manner. Please call 956-761-8123.

Recycling Stats July 2013

What do I do with my old stove, barbecue pit, and other miscellaneous scrap metal?

Aluminum Recycling

To illustrate the energy saved by recycling metal, let's take a look at aluminum cans. Producing an aluminum can from recycled aluminum requires just 5 percent of the energy originally required to create an aluminum can from primary raw materials. This energy savings is significant; recycling a single aluminum can saves the energy equivalent of a 100-watt light bulb burning for four hours. Aluminum cans are among the most highly sought-after containers in the recycling industry, and with 54 billion cans recycled annually, they are the most commonly recycled consumer product. Almost all curbside recycling programs will accept aluminum cans as well as aluminum foil.

Steel Recycling

Similarly to the energy saved with aluminum recycling, the amount of energy saved in using recycled steel is 74 percent compared to manufacturing a steel product using virgin ores. It is quite remarkable that the steel industry has been recycling steel into new products for more than 150 years. Steel is the most commonly recycled material in the United States, and it can be recycled and turned into new steel products an infinite number of times. Steel containers, lids and household items are accepted by almost all curbside recycling programs.

Scrap Metal Recycling

Scrap metal, which includes both ferrous metals such as iron and steel, and nonferrous metals like aluminum, copper, tin and brass, can be reclaimed from many household appliances and used in the manufacturing of new products. washers, dryers, refrigerators, stoves, ovens and water heaters are all valuable sources of this scrap metal. A few curbside recycling programs will accept these appliances, but in most areas you will need to take them to a local metal recycling center. To save yourself the trouble, when you purchase a new appliance, ask the delivery representatives to take the old one with them for recycling.

Metal Recycling Centers

If curbside recycling programs don't accept the metal you wish to recycle, be sure to investigate your local metal recycling centers. Most will pay you for some of the metal you bring them, and some even have drive-through service.

Totals :	150	77	174

Mosquito Fast Facts

1. In the interest of science, Arctic researchers uncovered their chests, arms, and legs and reported as many as 9000 mosquito bites per person, per minute. At this rate, and unprotected human would lose one half of his blood supply in approximately 2 hours.
2. Some people are more attractive to mosquitoes than others. It is not clear why, but probably has something to do with the 300 odd chemicals produced by the skin.
3. A mosquito can smell the carbon dioxide you exhale from about 60 to 75 feet away.
4. Most mosquitoes do not fly very far from their larval habitat, but the salt marsh mosquito migrates 75 to 100 miles over the course of its life.
