

AEP Scheduled Outage

A large, light blue watermark of the AEP logo is centered in the background. It consists of a circle with a lightning bolt striking down from the top.

Weather permitting, AEP Texas has scheduled momentary outages lasting one-to-two minutes for the South Padre Island area early Thursday and Friday morning.

AEP Texas crews will replace equipment at the local substation around 3 a.m. on both days, and the outage is needed to complete the work safely.

Approximately 5,500 customers will be impacted although not everyone will be impacted on both days.

Customers are reminded that sensitive electronic equipment should be connected to surge protection devices as a standard day-to-day practice.

Customers with questions should call the AEP Customer Operations Center at 1-877-373-4858.
